

just coding things

12.2.2019

Agenda:

- How to Add Buttons
 - Image Buttons
 - Regular Buttons
 - Make it Clickable
- Work on Projects

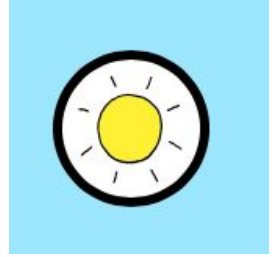

Buttons:

Click Me!

- HTML Code:
 - `<button type="button" class = "clickButton">Click Me!</button>`
 - Text inside the button
 - Name the class to change that specific button
- CSS:
 - Can change background-color, font-size, font, borders, etc.

Buttons:

- HTML Code:
 - `<input type="image" src="sunLogo.PNG" name="button" class="sun"/>`
 - Change the image with image address or picture from your folder
 - Name the class to change CSS of button
- CSS:
 - Added a black border 2px

Buttons:

- You have created buttons now, but when you click on them, they don't do anything!
- To make them do things, we need to use Javascript

Buttons (Javascript):

- You first need to define variables for your button, because Javascript can't read HTML tags. Define variables with classes
- Code:
 - `var sun = $('.sun');`
 - `var body = $('body');`
 - `sun.on("click", changeColor);`
 - `function changeColor(){`
 `body.css('backgroundColor', "black");`
 - `}`

Link Javascript to HTML:

- `<script type="text/javascript" src="name.js"></script>`
- `<script
src="https://ajax.googleapis.com/ajax/libs/jquery/2.1.3/jqu
ery.min.js"></script>`

Thank You For Coming!
