[ just coding things ]

11.22.2019

# Today We Will Be Learning About:

- Media Inquiries
- WireFrame
- Awwwards.com

# Media Inquiries:

- When you have different screen sizes, you may want the website to look different.
- Code:

```
@media only screen (max-width: 500px){
    Insert code here
}
```

# Example:

```css
body {

    background-color: tan;

}
@media screen and (max-width: 992px) {

    body {

        background-color: blue;

    }

}

    @media screen and (max-width: 600px) {

        body {

            background-color: olive;

        }

    }
```

# WireFrame:

- Wireframing is the term you use when you want to plan out how your website works on a piece of paper
- To get inspiration for your website, go on https://www.awwwards.com/

# Linking the CSS

- Once you know the format, you link the CSS inside the head tag with this code

### &lt;link rel="stylesheet" href="styles.css"&gt;

- Now, your code should be linked together.
- From that, you can create more files to make more pages for your website

# Next Week:

- Keep Working on Websites
- Learn how to use buttons and make them work

# Thank You For Coming!
